

Safim awarded for the “Technical Innovation Contest - Eima International 20-21”

The Technical Innovation Contest Eima takes place during the two yearly international exhibition. Federunacoma committee awarded Safim s.r.l. for the development of new solution for the hydraulic brake system of towed vehicles.

Modena, October 2020 – Safim S.r.l is synonymous of Research & Development of products aimed to offer solutions predicting market trends. The award assigned by a technical commission judging all participants to the “innovation contest” confirmed once more the good results of the research and development team of the company.

“Since the introduction of the EU2015/58 rule, commonly called “mother regulation”, even towed vehicles started installing dual-line braking systems” – Maurizio Collavini Trailer Braking System Project Leader tells- “such trend raised the necessity to connect those tractor still present and working on field, but provided of a single-line hydraulic brake system, to trailer provided of dual-line system”.

The R&D technical team designed and projected the device, supported by the important presence of Mr. Eronne Mamei, a great connoisseur of the sector, and with the project management of M. Collavini. Such device allows single-line tractors to tow all those new generation trailers equipped with dual-line system, however preserving and granting all those performance and safety features such system would have if connected to a dual-line tractor respecting the European rules, like:

- a) Unlocking of the automatic trailer brake
- b) Service brake command
- c) Automatic trailer brake engaging in case of trailer disconnecting from tractor
- d) Automatic trailer brake engaging in case of tractor parking brake activation
- e) Automatic trailer brake engaging in case the tractor’s engine turns off

“We believe the device represents a further step in terms of safety, completing the process ruling all the coupling between tractors and towed vehicles having different hydraulic braking system. We are so proud of the award received and we want to thank the commission who believed Safim deserved the title”
